Master 2 reaserch topics :

Title

Ordinal Regression Heads and Loss Functions for Fine-Grained Arabic Readability Assessment.

Simple academic description

This project treats readability levels as an ordered scale, not as unrelated classes, because BAREC labels follow increasing difficulty from kindergarten to postgraduate.
The students will compare different ordinal-learning methods, such as CORAL ordinal regression and QWK-oriented loss strategies, while keeping the same dataset and evaluation metric (QWK) to make a fair comparison.
The goal is to identify which ordinal head and loss function gives the best performance and the smallest error distance (near-miss instead of far-miss) under CPU-friendly training settings.

Reading order (max 3)

1. ZAI at BAREC Shared Task 2025: AraBERT CORAL for Fine Grained Arabic Readability /
2. STBW at BAREC Shared Task 2025: AraBERT-v2 with MSE-SoftQWK Loss — loss design aligned with QWK/ordinal distance.
3. A Large and Balanced Corpus for Fine-grained Arabic Readability Assessment (BAREC corpus paper).
4.
